Features of Object- Oriented Programming

- **Class:**
 - A blueprint or prototype from which objects are created.
 - A class contains variables (data types) and methods (functions) to describe the behavior of an object.
 - Example:

```
class Class_Name
{
    member variables
    methods
}
```

```
class Computer
{
    String Maker;
    int Model;
    String Color;
    void turnOn
    {
        //statement(s)
    }
    void turnoff
    {

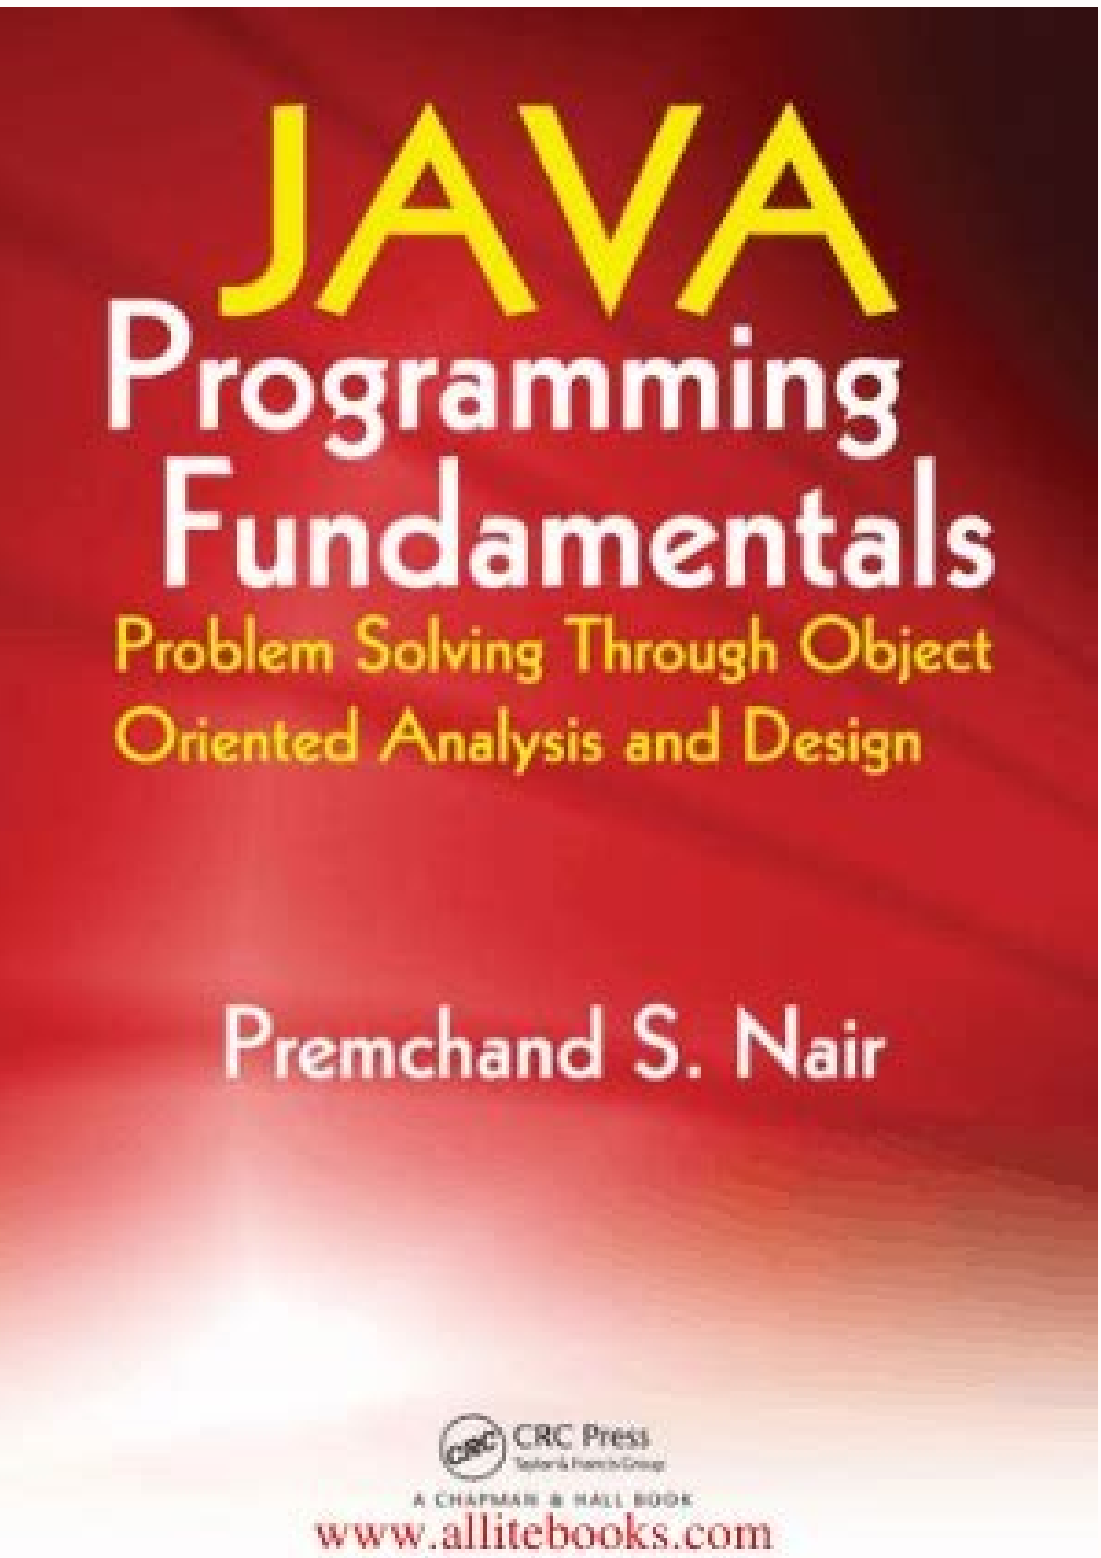

```
